THE PHARMACY ACT

O. Reg. 683/74.

Parcost C.D.I.

Made—September 4th, 1974.

Filed—September 10th, 1974.

REGULATION MADE UNDER THE PHARMACY ACT

PARCOST C.D.I.

1. For the purposes of the Act, the Parcost C.D.I. is the comparative drug index contained in the Schedule hereto:

Schedule

PART I

INTRODUCTION

1. The Parcost Comparative Drug Index has been compiled by the Ministry of Health and its advisory committee, "The Drug Quality and Therapeutics Committee".

2. The Index is a compilation of pharmaceutical preparations, arranged in comparative categories and groupings according to the nature, strength and dosage form of the active therapeutic constituent.

3. The products listed in the Index meet recognized standards of quality required by The Drug Quality and Therapeutics Committee.

4. Except where indicated otherwise by the words "not interchangeable", for the purposes of subsection 1 of section 52 of the Act, products listed in the same chart of the Parcost C.D.I. are interchangeable.

5. The cost listed in the Index is derived from a price submitted by the pharmaceutical manufacturer or supplier and is based on the package size listed for the product in the C.D.I., and represents the maximum price the pharmacist or hospital should pay for the product.

6. Manufacturers distributing primarily direct to the pharmacy are indicated by a symbol (D) after the firm name in the MANUFACTURERS' PRODUCTS LISTS SECTION.

7. The cost of prescribed pharmaceutical preparations to the patient is composed of two major components:

i. Product cost to the pharmacist.

ii. Pharmacist's professional fee.

For the purposes of section 52 of this Act, the product cost-plus professional fee method of pricing a prescription shall be used and the prescription fee so used shall not exceed a maximum of \$2.40.

Hypertension — Fixed Combination Drugs

A fixed combination drug is not indicated for initial therapy of hypertension. Hypertension requires therapy titrated to the individual patient. Recognizing this, if the fixed combination drug meets that titrated dose of its individual components, its use may be more convenient in the management of the individual patient. The treatment of hypertension is not static, it must be re-evaluated as conditions in each patient warrant.

REGULATION MADE UNDER
THE INSURANCE ACT

REPLACEMENT OF LIFE
INSURANCE CONTRACTS

1. In this Regulation,

- (a) "insurer" means a person licensed to carry on the business of life insurance in Ontario; and
- (b) "replacement of a contract of life insurance" means any transaction whereby insurance is to be purchased in a single policy or in more than one related policies by a person from an insurer, and, as a consequence of the transaction, any existing contracts of life insurance that contain provision for cash surrender and paid-up values have been or are to be,

(i) lapsed or surrendered,

(ii) changed to paid-up insurance or continued as extended term insurance or under automatic premium loan,

(iii) changed in any other manner to effect a reduction in that portion of a life insurance contract that contains provision for cash surrender and paid-up values,

- (v) subjected to substantial borrowing of any policy loan values whether in a single loan or under a schedule of borrowing over a period of time whereby an amount in excess of 50 per cent of the tabular cash value is borrowed on one or more policies,

but does not include a transaction wherein,

- (vi) a new contract of life insurance is made with an insurer with whom the applicant has an existing policy or a certificate of insurance in furtherance of a contractual conversion privilege to be exercised by a policyholder or certificate holder in another contract of life insurance or group insurance issued by the insurer, or
- (vii) the existing life insurance contract to be replaced is a non-convertible term policy with five years or less to expiry and which existing contract cannot be renewed by the policyholder. O. Reg. 831/74, s. 1.

DUTIES OF AGENT

2. Every agent for an insurer shall,

- (a) obtain as part of each application for a contract of insurance a statement signed by the applicant stating whether replacement of a contract of life insurance is intended; and
- (b) prepare and forward to the insurer with each application for a life insurance contract a statement stating to the best of his knowledge whether replacement of a contract or contracts of life insurance is intended. O. Reg. 831/74, s. 2.

3. Where replacement of a contract of life insurance is intended, every agent for an insurer shall,

- (a) obtain with or as part of each application a list of all life insurance contracts intended to be replaced and where replacement of more than one life insurance contract is intended,
 - (i) list in Form 1, the policy numbers and the names of the insurers that issued any additional life insurance contracts intended to be replaced, and

- (ii) attach to Form 1 additional comparison statements giving the prescribed information for each additional life insurance contract intended to be replaced;

(b) compile and present to the applicant and leave with the applicant for his records, not later than at the time of taking the application, a form signed by the agent and completed in accordance with Form 1 and as prescribed in clause a;

(c) forward, unless the applicant otherwise directs in writing, a completed copy of Form 1 to every insurer whose contract is intended to be replaced;

(d) where a substantial borrowing on an existing contract of insurance is involved in the transaction, caution the applicant that it is not usually advisable to borrow against policy loan values beyond the expected ability or intention of the applicant to repay;

DUTIES OF INSURER

4. Every insurer shall,

- (a) ascertain that its agent has complied with the requirements of this Regulation and the Act;

The Insurance Act

PART 1

NOTICE TO APPLICANT REGARDING REPLACEMENT OF LIFE INSURANCE

1. Pursuant to the requirements of *The Insurance Act* and the regulations, this notice and comparison statement are provided for your information and protection since you are considering changing your existing life insurance. This change may involve the use of the proceeds available to you under your existing life insurance to buy another form of life insurance. The proceeds of your existing life insurance may be made available by surrender, lapse, reduction in amount or substantial borrowing of the loan values of your existing life insurance.
2. In making your decision you may wish to consider whether it is to your benefit to drop or change existing life insurance to reduced, paid-up, or extended term insurance, in favour of new life insurance issued by the same or a different insurance company. Some of the reasons it may not be to your benefit are:
 - a. Since the sales costs of life insurance policies are charged in the earlier policy years, the replacement of an old policy by a new one may result in your paying these costs twice.
 - b. The amount of the premium for an existing policy may be less than that for a new policy having the same or similar benefits. Any replacement of the same type of policy will normally be at a higher premium rate based upon your present age.
 - c. The incontestable and suicide clauses in life insurance policies begin anew in a new policy. This could result in a claim which would be denied under a new policy but which would have been paid under the policy which was replaced.
 - d. If your insurability has changed adversely, a new contract may be more costly and contain restrictions. Your existing contract should not be altered or terminated until your present degree of insurability is ascertained.
 - e. You may find that the interest rate on policy loans and other policy conditions or benefits are more favourable under your existing insurance.

Please consider these reasons when you examine the attached Comparison Statement.

3. For your protection you may wish to receive comments or quotations from your present or another life insurance company before arriving at a decision.

(c) where the point of emission is not affected by any of the conditions described in sub-clauses i, ii or iii of clause a or subclauses i, ii or iii of clause b, the following formula shall be applied:
(see figures 16, 17, 18 and 19)

$$K = \frac{10^6 \times Q \times F}{6.28 \times \sigma_y \times \sigma_z \times U} \times \exp \left[-\frac{1}{2} \left(\frac{Y}{\sigma_y} \right)^2 \right] \times \left\{ \exp \left[-\frac{1}{2} \left(\frac{Z-H}{\sigma_z} \right)^2 \right] + \exp \left[-\frac{1}{2} \left(\frac{Z+H}{\sigma_z} \right)^2 \right] \right\}$$

Where: K is the half hour average concentration of the contaminant at the point of impingement in micrograms per cubic metre

Q is the rate of emission in grams per second of the contaminant

U is the wind speed in metres per second

exp is the exponential function where e = 2.7183

Y is the straight line distance in metres between the point of impingement and a vertical plane through the point of emission in the chosen direction of the wind
(see figure 20)
(see note 3)

Z is the difference in height, in metres, between the point of impingement and the ground level at or beneath the point of impingement

H is the effective height of the emission of a contaminant

F is a factor related to the atmospheric stability of the air

σ_y is a function which defines the amount of dispersion of the contaminant in a horizontal direction at the point of impingement

σ_z is a function which defines the amount of dispersion of the contaminant in a vertical direction at the point of impingement

- Determination of K
1. Two values for K shall be determined using the formula in clause c.
 2. The maximum value obtained for K shall be applied in this Regulation.
(see note 1)

Value number 1 for K is determined as follows:

Where: U is the speed of the wind in metres per second
(see note 2)

H is determined as follows:

$$K = h + \left(\frac{v_{sd}}{u} \right) \cdot \left[1.5 + 2.68 \frac{(T_s - 283)d}{T_s} \right]$$

Where: h is the height above grade, in metres, of the point of emission

v_s is the speed in metres per second in an upward vertical direction of the contaminant gas stream at the point of emission to the atmosphere
(see note 4)

d is the diameter in metres of a circle of equivalent area to that area through which the contaminant gas stream enters the air

u is the speed of the wind in metres per second
(see note 5)

T_s is the temperature in degrees Kelvin ($273^\circ +$ temperature in Degrees Celsius) of the contaminant gas stream at the point of emission

F is 0.6

δ_y is determined as follows:

Calculate X where X is the horizontal distance in metres between the point of emission and the line where vertical planes, one through the point of emission and parallel to the chosen direction of the wind and the other through the point of impingement, meet at right angles.
(see figure 21)
(see notes 6 and 7)

Where the value of X is equal to or less than 2500

$$\delta_y = 0.176X \quad 0.92445$$

When the value of X is greater than 2500

$$\delta_y = 0.268X \quad 0.87248$$

δ_z is determined as follows:

When the value of X is determined in the calculation of δ_y is equal to or less than 2500

$$\delta_z = 0.106X \quad 0.91926$$

When the value of X is greater than 2500

$$\delta_z = 0.120X \quad 0.90564$$

(see note 8)

Value number 2 for K is determined as follows:

H has the same value for H as determined for value number 1 for K

F is 0.8

δ_y is determined as follows:

Where X has the same value for X as determined for value number 1 for K

Where the value of X is equal to or less than 700

$$\delta_y = 0.110 X^{0.93062}$$

Where the value of X is greater than 700 but less than 7000

$$\delta_y = 0.120 X^{0.91837}$$

Where the value of X is equal to or greater than 7000

$$\delta_y = 0.191 X^{0.86538}$$

δ_z is determined as follows:

Where X has the same value as determined in the calculation of δ_y

Where X is equal to or less than 700

$$\delta_z = 0.091 X^{0.8553}$$

Where X is greater than 700 but less than 7000

$$\delta_z = 0.352 X^{0.6495}$$

Where X is equal to or greater than 7000

$$\delta_z = 0.955 X^{0.53857}$$

(see note 8)

- NOTES:
1. Where K yields a value greater than the concentration of the contaminant at the point of emission, the concentration of the contaminant at the point of emission shall be deemed to be the value of K.
 2. The wind speed shall have a minimum value of 2.235 metres per second and a maximum value of 18.235 metres per second. A value of K shall be determined for wind speed increments of 0.5 metres per second until a maximum value of K is found.
 3. Where only a single point of emission is being evaluated the wind direction shall be so chosen that the value of Y becomes zero (therefore the value of exp expression containing Y becomes equal to one.)
 4. Where the value of v_s is less than 7 metres per second the value of v_s shall be zero.
 5. The value for u shall be consistent with the values substituted directly for u in the equation used for evaluating K.
 6. Where a single source of emission is being evaluated, the wind direction shall be so chosen that the value of x shall be the horizontal distance in metres between the point of impingement and a vertical line through the point of emission. (see figure 22)
 7. In the calculation of K at ground level, the value of X shall be so chosen that the maximum value of K is found.
 8. For each point of impingement, for each wind direction chosen, and for each value of x, u shall be varied until the maximum value of K is found.

(d) where the emissions of a contaminant are from more than one source, the contaminant concentrations at the point of impingement, resulting from each individual source, for the conditions set out in clauses a, b and c shall be added together to give an aggregate value for K.

The aggregate value of K shall be determined for all wind directions and all permissible wind speeds for value of K, where applicable. The largest aggregate K obtained shall be the value of K to apply in this Regulation. O. Reg. 873/74, s. 6.
